

Access Connect/ Data Connect (AC/DC)

The Access Connect/ Data Connect (AC/DC) team is increasing data accessibility for a range of DoD stakeholders.

In support of the Air Force's data needs, BESPIN is expanding data dissemination, analytics, and artificial intelligence capabilities across a broad range of users. The AC/DC team is increasing data access to forge a better understanding of user trends. Strategies include:

- Integrating a reusable and repeatable open standard data API
- Exposing data previously locked behind monolithic applications
- Creating tools for centralizing and tracking data

Current offerings

The AC/DC team creates data infrastructure for Air Force applications, including:

Application 'code blueprints'

Support for other BESPIN applications in creating application 'code blueprints' that assist teams with data collection and access.

Readiness tracking dashboards

Creating dashboards to track user metrics around troop readiness and training trends to understand user behaviors.

What's next

The AC/DC team aims to facilitate a better understanding of data trends across the Air Force. The team will make data accessible to high-level leadership, so that they can make more informed decisions in real time. AC/DC will also focus on data security, integration, and building dashboards to visualize and track data across sources.
